

Project Design Phase-II

Data Flow Diagram & User Stories

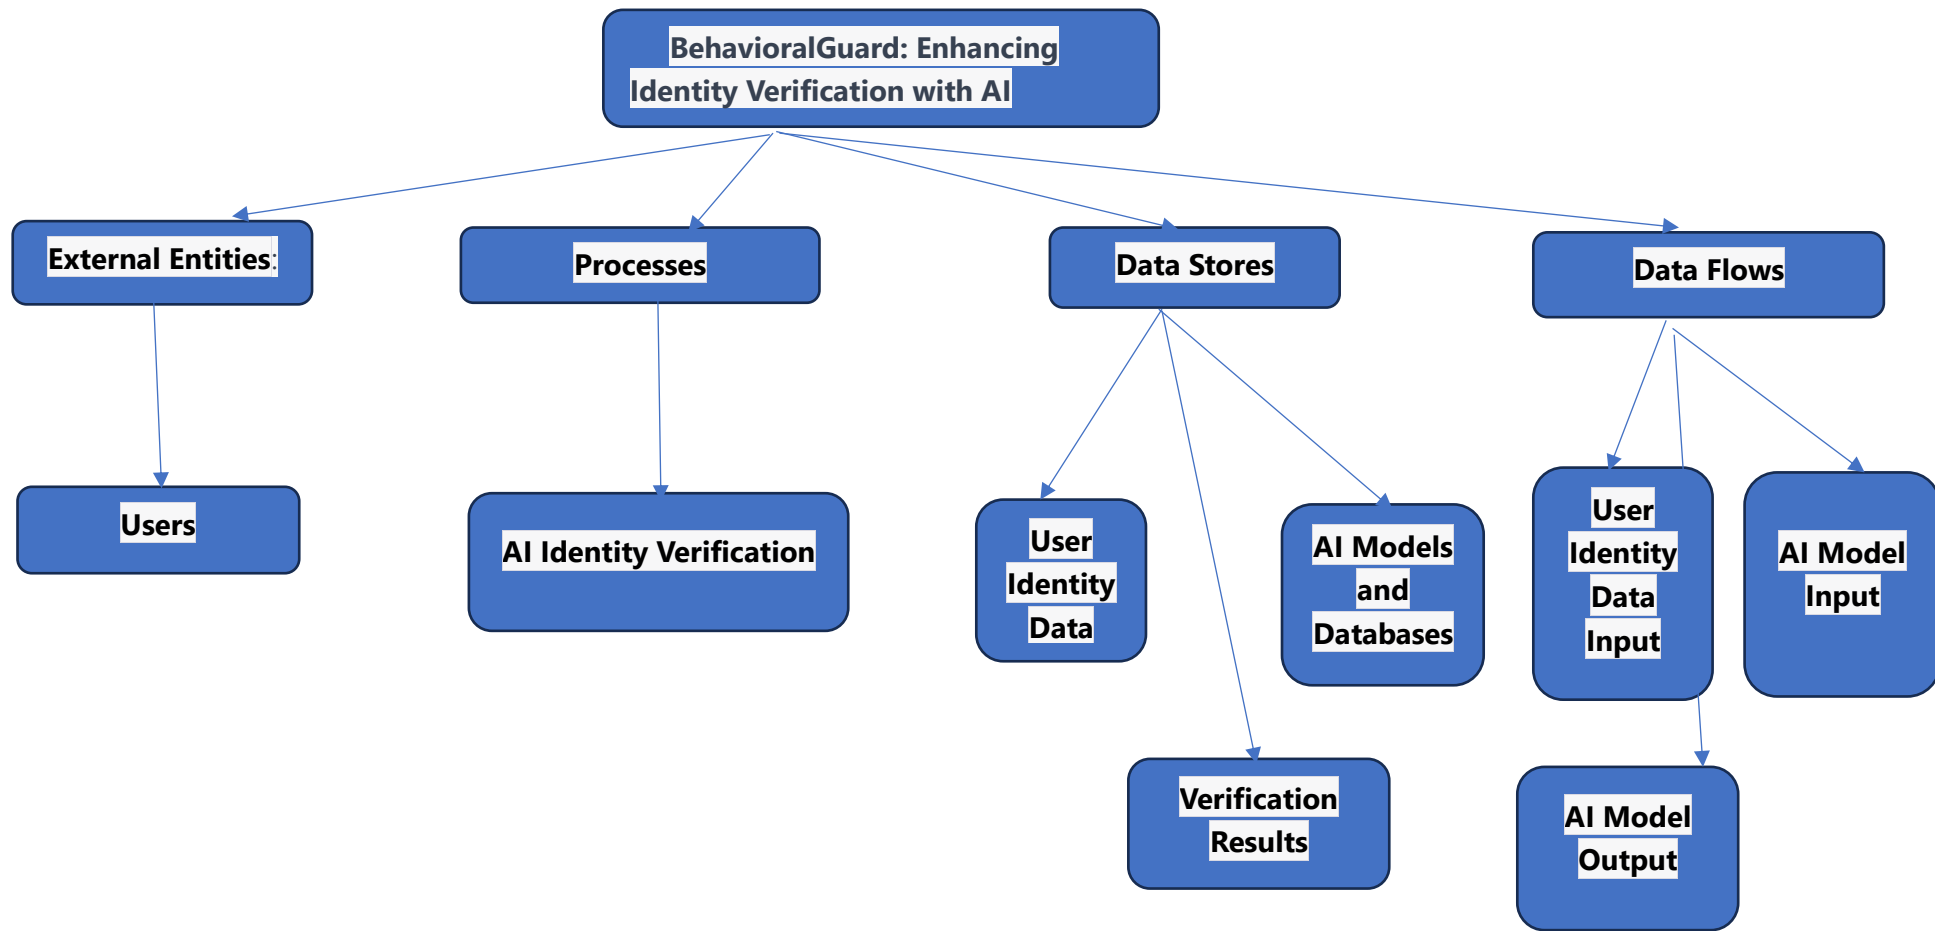

Date	26 October 2023
Team ID	TEAM-591496
Project Name	BehavioralGuard: Enhancing Identity Verification with AI
Maximum Marks	4 Marks

Data Flow Diagrams:

A data-flow diagram is a way of representing a flow of data through a process or a system. The DFD also provides information about the outputs and inputs of each entity and the process itself. A data-flow diagram has no control flow — there are no decision rules and no loops. DFDs are commonly used for visualizing how information is processed in various systems and are particularly useful in system analysis and design. They help in understanding data movement and can be used for system documentation and communication with stakeholders.

A data flow diagram (DFD) is a graphical representation of how data moves within a system or process. It uses various symbols and arrows to depict the flow of data from sources to destinations. Without subtitles, here's a basic explanation of the key elements typically found in a DFD:

A data flow diagram (DFD) is a visual representation of a system or process that illustrates how data is input, processed, stored, and output within that system. It uses various symbols and arrows to depict the flow of data from sources, through various processes, and to its destinations, helping to provide a clear and structured overview of data movement in a system. DFDs are commonly used in system analysis and design to facilitate communication, documentation, and understanding of data flow and processes within a given context.

User Stories :

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Type-1	Login	USN-1	As a user, I feel it was very secure and it will not allow any others to use our system or dashboards. And it will keep on monitoring our behaviour of using the device and modifying itself in the feature of identifying the use. So, we don't need to worry about our change in style.	I can access dashboard securely	Medium	Sprint-1
		USN-2	As a user, I can use this system with secure feel this was very secure and user friendly . it was providing very smooth experience while using it. we already entered to the dashboard and using it also the theme of security providing was not stopped because as it was continuously monitoring our behaviour of using it.so, it was very secure	I am feeling secure while using this system	High	Sprint-1
		USN-3	As a user, I am able to use my device very securely and it was giving myself very secure and privacy device.	I can more safe using this then any other system	Low	Sprint-2
	Entering	USN-4	As a user, by using the system I didn't need to worry about login and logout because of its continuous monitoring feature. It will be very useful to me	I can feel ease using this	Medium	Sprint-1
		USN-5	As a user, I can feel at ease while using the system it was very secure and very user freindly.		High	Sprint-1
